

Single Product
Now Supports
Billing, Analytics
and Quality
Reporting

**F1RSTAnesthesia
FEATURES
Anesthesia
Touch™**

The F1RSTAnesthesia billing platform now has an **integrated anesthesia information management system (AIMS) with Anesthesia Touch™**. One product now does it all—from billing to information management to quality reporting. This enhanced system gives anesthesia providers the power to manage their billing, their data, their quality reporting and their practice!

- ABC provides **Anesthesia Touch** free of charge to its billing clients so they can use it in any facility they may have that is not already on an electronic anesthesia record. It provides a very streamlined and totally paperless billing operation. The process also directly interfaces with Epic and Cerner in over 400 hospitals where it automatically extracts billing information—including the data for quality reporting.
- ABC also provides clients a compliance report each month on all anesthesia providers, showing their compliance on each MIPS measure reported on. This data is automatically extracted from Epic, Cerner and our own record, **Anesthesia Touch**. This data can then be electronically sent to your data repository or can be deposited in our Qualified Registry and sent to CMS. Like the electronic record, this quality reporting is also provided to your group free of charge to ABC billing clients.

**The only partner that covers your
anesthesia needs from start to finish.**
