

Patient monitoring software that simplifies the delivery of complex care.

We accomplish this by integrating, analyzing and displaying patient information so clinicians can respond earlier to potentially harmful problems.

AlertWatch: OR

Our real-time patient dashboard integrates data into an intuitive organ-based interface that reimagines how to communicate critical information so that it is more obvious, meaningful and actionable.

- 1 Smart Alerts focus attention on potentially harmful patient situations
- 2 MAC is displayed & serves as a low-cost alternative to BIS monitors
- 3 Risk factors are clearly labeled to facilitate comprehensive handoffs

- 4 Common protocols and references are a click away
- 5 Physiologic Signals can be viewed remotely
- 6 Calculations, like I/O Balance, are automated

How it Works

AlertWatch integrates data from all of the relevant hospital IT systems.

Floor View

Clinicians can review the entire unit and quickly assess who needs immediate attention.

U-OR 01 127347881 Patient Arnold Patient in Room	U-OR 02 157842982 Patient Beth Induction End	U-OR 03 105762057 Patient Candice Surgical Incision	U-OR 04
