

FIRSTAnesthesia

F1RST*Anesthesia*

Most industry experts would agree that it is nearly impossible to stay abreast of constantly evolving payer reimbursement policies without powerful tools that allow a well-motivated staff to constantly monitor subtle patterns of reimbursement. Anesthesia billing and accounts receivable management pose numerous special data management challenges.

The backbone to the OneSource*Anesthesia* (OSA) architecture is the ability to integrate and leverage the F1RST*Anesthesia* billing suite developed specifically for Anesthesia Business Consultants (ABC). F1RST*Anesthesia* is the latest in a series of fundamental system enhancements made necessary and possible by the demands of today's anesthesia providers and the potential of Oracle technology. No other stand-alone software package or billing service system offers such an array of powerful practice management tools.

Efficient workflow and internal quality edit checks make for fewer errors, less need for review and revision and a much more productive processing of charges. Time saved on the front-end of the billing process can be refocused on customer service and follow-up. Such efficiency allows ABC to offer the most cost-effective service to its customers.

No one feature of a billing system is more critical, yet more difficult to integrate, than real-time payment verification. F1RST*Anesthesia* is unique in the way it calculates both the usual and customary charge and the allowables simultaneously. This not only facilitates the validation of payments against allowable contract amounts, but also permits reports to be generated showing expected payments and true accounts receivable.

The system captures both CPT surgical and ASA codes for all anesthesia charges so that claim forms will automatically include the appropriate code.

F1RST*Anesthesia* is specifically designed with the anesthesia and pain provider in mind and allows for a variety of interface options and data access platforms. The system incorporates years of practical experience in the oversight and management of all the steps involved in billing and collections.

System features and functionality have value only if they make a difference to your income and lifestyle. As the nation's largest provider of billing and management services to anesthesia providers, our mission is to anticipate the changes taking place in your practice with services and tools that not only make your life easier, but which will give you a distinct competitive advantage. All too often the information that is easiest to capture and report has little real-time utility. F1RST*Anesthesia* is a dynamic database tool that offers you, the practitioner, all the insights and advantages of 32 years of anesthesia practice management experience.

No other system can have such a positive impact on your bottom line: net collections for the services you provide.

**“No other system
can have such a
positive impact on
your bottom line...”**

Anesthesia Business Consultants is offering the OneSource*Anesthesia* mobile architecture to support the entire perioperative process:

ePREOP Patient portal, pre-admission testing, and preoperative holding anesthesia checklist and evaluation documentation tool available over a mobile platform to patients, facilities and providers.

eCHARGE Electronic charge capture tool to replace any existing paper-based charge slip process. Automatic integration with ePREOP and upload to ABCs billing system, *FIRSTAnesthesia*.

MetaVision Suite Anesthesia Information Management System (AIMS) built by *iMDsoft* providing clinical providers with over 10 years of industry experience and industry expertise. Automatic integration with the ePREOP system as well as with *FIRSTAnesthesia*. The system also provides electronic records to the surgical facility's hospital information system.

FIRSTAnesthesia ABC's billing and practice management solution built specifically to meet the operational needs of ABC as well as meet the needs of our physicians, patients, and payers. Built on an Oracle infrastructure, the system enables ABC to remain agile in an otherwise fractured and unpredictable regulatory and operational environment.

ePOSTOP Clinical outcomes and a quality indicator collection tool enabling practices to document and perform biostatistical analysis on their own data. Automatic upload is available to the Anesthesia Quality Institute (AQI) to allow practitioners the ability to benchmark their operations with other providers in the regional or national markets.

FIRSTConnect General interface engine available to customers not taking advantage of the MetaVision suite from *iMDsoft*. Allows customers to upload procedure and provider information from an existing AIMS directly to ABC for billing purposes.
